

Aurelian Oil & Gas PLC

Trzek-1

Aurelian Oil & Gas PLC ("Aurelian" or the "Company"), the exploration and production company focused on Central Europe, is pleased to announce the updated schedule for the testing of Trzek-1 in Poland. A work-over rig has been secured and a contract for fracking concluded with Halliburton . The testing is to commence in late October and is expected to last some 14 days and will be followed by a shut-in period of a similar duration. The delay, in the arrival of the work-over rig at Trzek-1, has arisen as a result of the late release of the work-over rig from its current location.

As announced on 19 July, Trzek-1 encountered a gross column of 89 metres of gas in the Permian Rotliegendes Formation. In common with the four wells drilled on this significant Siekierki structural trend by the state company in the 1970s/1980s, the section shows acceptable porosities, although with relatively low permeability. The testing programme has been designed to establish the commercial potential of the Siekierki structure.

Further announcements will be made as appropriate information from the testing becomes available.
